

Math 104: Calculating Surface Area

Ryan Blair

University of Pennsylvania

Tuesday February 26, 2013

Outline

- 1 Shell Method Review
- 2 Areas of surfaces of revolution

Shells Method

The general formula for calculating volumes of revolution using the shell method.

$$\text{Vol} = \int_a^b \text{volume of the shell slice}$$

When rotating about the y -axis we get

$$\text{Vol} = \int_a^b 2\pi(\text{radius of shell})(\text{height of shell})dx$$

Shells Method

The general formula for calculating volumes of revolution using the shell method.

$$\text{Vol} = \int_a^b \text{volume of the shell slice}$$

When rotating about the y -axis we get

$$\text{Vol} = \int_a^b 2\pi(\text{radius of shell})(\text{height of shell})dx$$

Find the volume of the solid obtained by rotating the region in the xy -plane bounded by
 $y = x^3$ $y = 0$ $x = 2$
about the y -axis.

Areas of surfaces of revolution

Definition

The **Area of the surface** generated by revolving the graph of $y = f(x)$ about the x-axis is

$$SA = \int_a^b 2\pi f(x) \sqrt{1 + \left(\frac{dy}{dx}\right)^2} dx$$

The **Area of the surface** generated by revolving the graph of $x = g(y)$ about the y-axis is

$$SA = \int_a^b 2\pi g(y) \sqrt{1 + \left(\frac{dx}{dy}\right)^2} dy$$

Examples

Example 1: Find the area of of the object obtained from rotating the curve $y = \sqrt{4 - x^2}$ from $x = -1$ to $x = 1$ about the x-axis.

Example 2: Find the area of of the object obtained from rotating the curve $y = x^{\frac{1}{3}}$ from $x = 0$ to $x = 1$ about the y-axis.

Why Math is Awesome!(Gabriel's Horn)

Example 3: Find the area of the object obtained from rotating the curve $y = \frac{1}{x}$ from $x = 1$ to $x = b$ about the x-axis.

Example 4: Find the volume of the solid obtained from rotating the region bounded by $y = \frac{1}{x}$, $x = 1$, $x = b$ and $y = 0$ about the x-axis.

Why Math is Awesome!(Gabriel's Horn)

Example 3: Find the area of the object obtained from rotating the curve $y = \frac{1}{x}$ from $x = 1$ to $x = b$ about the x-axis.

Example 4: Find the volume of the solid obtained from rotating the region bounded by $y = \frac{1}{x}$, $x = 1$, $x = b$ and $y = 0$ about the x-axis.

Find the limit of these values as b goes to infinity.
