Math 104: Practice Midterm 3

Tuesday April 23, 2013 1 / 11

999

- Wednesday May 1st from noon until 2pm.
- Bring Penn ID and an 8.5x11 hand written page of notes.
- I5 multiple choice problems (8 on integration and applications, 5 on series and sequences, 2 on differential equations).

イロト イポト イヨト イヨト 二日

- My Office hours Thursday 3pm to 4pm, Tuesday 5pm to 7pm
- Other professors review sessions are open to you.
- Use the finals from spring 2011, fall 2011, spring 2012 and fall 2012 as your practice finals

イロト イポト イヨト イヨト

Show that the following sequence converges to zero.

$$\{\frac{\cos^2(n)}{2^n}\}$$

Show that the following sequence converges to zero.

$$\left\{\frac{\cos^2(n)}{2^n}\right\}$$

Theorem

(Squeeze) Given sequences a_n , b_n and c_n such that $a_n \leq b_n \leq c_n$ for all n and $\lim_{n\to\infty} a_n = \lim_{n\to\infty} c_n = L$, then

$$lim_{n\to\infty}b_n = L$$

Determine if the following series converges. If it does, find the value of the sum.

$$\sum_{n=1}^{\infty} \frac{3}{n(n+3)}$$

Determine if the following series converges. If it does, find the value of the sum.

$$\sum_{n=1}^{\infty} \frac{3}{n(n+3)}$$

Definition

The **n-th partial sum** for a sequence $\{a_i\}_{i=1}^{\infty}$ is

$$S_n = \sum_{i=1}^n a_i = a_1 + a_2 + a_3 + \dots + a_n$$

Definition

A Series

$$\Sigma_{i=1}^{\infty}a_i = lim_{n \to \infty}S_n$$

Ryan Blair (U Penn)

Math 104: Practice Midterm 3

For what values of p is the following series convergent?

$$\sum_{n=2}^{\infty} \frac{1}{n(\ln(n))^p}$$

590

▲白▶ ▲圖▶ ▲臣▶ ▲臣▶ 三臣

For what values of p is the following series convergent?

$$\sum_{n=2}^{\infty} \frac{1}{n(\ln(n))^p}$$

Theorem

Let f be a continuous, positive, decreasing function on $[c, \infty]$. If $a_i = f(i)$, then

• If $\int_{c}^{\infty} f(x) dx$ is convergent, then $\sum_{i=c}^{\infty} a_i$ is convergent. 2 If $\int_{c}^{\infty} f(x) dx$ is divergent, then $\sum_{i=c}^{\infty} a_i$ is divergent.

6 / 11

Determine if the following series converges or diverges.

$$\sum_{n=1}^{\infty} sin(\frac{1}{n})$$

990

▲白▶ ▲圖▶ ▲臣▶ ▲臣▶ 三臣

Determine if the following series converges or diverges.

$$\sum_{n=1}^{\infty} sin(\frac{1}{n})$$

Theorem

Let $\sum_{i=1}^{\infty} a_i$ and $\sum_{i=1}^{\infty} b_i$ be positive series. If

$$lim_{i\to\infty}\frac{a_i}{b_i}=C$$

where C is a finite positive constant, then either both $\sum_{i=1}^{\infty} a_i$ and $\sum_{i=1}^{\infty} b_i$ converge or both $\sum_{i=1}^{\infty} a_i$ and $\sum_{i=1}^{\infty} b_i$ diverge.

7 / 11

Show that the following series is conditionally convergent.

$$\sum_{n=2}^{\infty} \frac{(-1)^n}{\ln(n)}$$

590

▲白▶ ▲圖▶ ▲臣▶ ▲臣▶ 三臣

Show that the following series is conditionally convergent.

$$\sum_{n=2}^{\infty} \frac{(-1)^n}{\ln(n)}$$

Theorem

(Alternating Series Test) If the alternating series $\sum_{i=1}^{\infty} a_i$ satisfies

- $b_{i+1} \leq b_i$ for all i
- 2 $lim_{i\to\infty}b_i = 0.$

Then $\sum_{i=1}^{\infty} a_i$ converges.

For what values of k is the following series divergent?

 $\sum_{n=1}^{\infty} \frac{(n!)^2}{(kn)!}$

590

For what values of k is the following series divergent?

 $\sum_{n=1}^{\infty} \frac{(n!)^2}{(kn)!}$

Theorem

Given a series $\sum_{i=1}^{\infty} a_i$. If

$$\lim_{i\to\infty}|rac{a_{i+1}}{a_i}|=L,$$

then

- If L < 1, the series converges absolutely.
- **2** If L = 1, the test is inconclusive.
- If L > 1, the series diverges.

Find the interval of convergence for the following power series.

$$\Sigma_{n=1}^{\infty} rac{n(2x)^n}{(n^2+1)3^n}$$

E

・ロト ・聞ト ・ヨト ・ヨト

Find the interval of convergence for the following power series.

$$\Sigma_{n=1}^{\infty} rac{n(2x)^n}{(n^2+1)3^n}$$

 $R = lim_{k o \infty} |rac{c_k}{c_{k+1}}|$

Given a power series $\sum_{k=0}^{\infty} c_k (x-a)^k$ with radius of convergence R, the **interval of convergence** is one of the following where we include endpoints it the series convergence at those points.

$$(a-R,a+R), [a-R,a+R), (a-R,a+R], [a-R,a+R]$$

イロト イポト イヨト イヨト 二日

Bound the error in approximating e^x on the interval [-4, -2] using the first six terms in its Maclaurin series.

▲□▶ ▲□▶ ▲□▶ ▲□▶ □ のなべ

Bound the error in approximating e^{x} on the interval [-4, -2] using the first six terms in its Maclaurin series.

Theorem (Taylor's Theorem)

Given a Taylor Series $\sum_{k=0}^{\infty} \frac{f^{(k)}(a)}{k!} (x-a)^k$, if there is a constant M such that $|f^{(n+1)}(t)| < M$ for all t between a and x, then $|R_n(x)| < M \frac{|x-a|^{n+1}}{(n+1)!}$

11 / 11
